CLOUDGUARD ENTERPRISE SECURITY & COMPLIANCE POLICY (v2026.4)

1. Encryption Standards:
All production storage buckets in AWS S3, Azure Blob, and GCP Cloud Storage must enforce AES-256 encryption at rest and TLS 1.3 in transit. Unencrypted buckets must be remediated within 4 hours of detection.

2. Identity and Access Management (IAM):
Root accounts must have hardware MFA enabled. Privileged role sessions are restricted to a maximum duration of 1 hour. Service account keys must rotate every 90 days.

3. FinOps Governance:
Any cloud resource exceeding $5,000 monthly spend without an 'Environment' and 'CostCenter' tag will be flagged for executive audit review.
